

AVC frequency convergence

Mode 0 (tip, vibrating mode) residual vs. time (faint: raw signal, bold: moving RMS trend)

Overall residual (RMS across all 40 modes) vs. time (faint: raw signal, bold: moving RMS trend)

AVC internal state: is the online plant estimate (x_1, x_2) stable?

(a stable estimator would flatten out; a wandering/near-zero plant estimate here explains a growing correction)
